# **LESS TIME FOR WAXING IS MORE TIME FOR SKING**

Optiwax is a Finnish wax brand for snowboarding, alpine skiing and cross country skiing. The products are developed by an award winning company, led by a large group of powerful players in the ski world. Their enthusiastic and long term efforts strive to deliver more pleasurable skiing by making the preparation of skis as easy as possible. Besides ski waxes, our nano-technology is also used in waxless cross country skis, which won the most prestigious innovation award in Finland in 2010.

Our goal is to make preparing skis easier and faster, which means you can spend more time enjoying your skis and less time maintaining them. After several years of testing, we are happy to bring the Optiwax collection of ski waxes to the market. Optiwax has a broad product line for both beginners and professionals. Optiwax Glide Tapes are the easiest choice for beginners, but thanks to their excellent gliding properties and extremely good durability they are also widely used among racing athletes. Fluor powders, blocks, gliders, glide tapes, and grip waxes are named by using the numbers from zero to three ensuring total ease of choice. The Optiwax products for wax free skis will help Nanogrip, Optigrip and etouch ski owners take care of their ski equipment.

## GLIDE TAPES FOR XC-SKIING

The perfect pleasure of skiing can only be achieved with excellent glide. When the glide wax is long-lasting, fast, and easy to use, you can enjoy the best of skiing every time. Our Optiwax glide tapes are the number one choice, especially for beginners. Tape waxing can be done without any special waxing equipment and it results in almost racing level glide for up to 200 kilometers.

The glide tapes are also widely used by ski racers – the durability has offered many great results in long ski marathon races. The glide tape is also the perfect choice for skiing holidays due to the fact that one single visit to the wax room offers great glide for many days. World class athletes also appreciate the extreme durability and ease-of-use of our Optiwax glide tapes. Optiwax has three different widths of glide tape for XC-skiing, alpine skiing, and snowboarding.

### GLIDE TAPE 1 +5...-10°C

Glide Tape 1 is high fluor wax for cross country skiing, made for high humidity conditions. Wide function range and glide properties on wet and dirty snow makes Glide Tape 1 a great universal glide.

Width 60 mm, length 10 m  
Product No. 20110081

Width 60 mm, length 40 m  
Product No. 20110401

Width 60 mm, length 250 m  
Product No. 20112501

### GLIDE TAPE 2 -5...-20°C

Glide Tape 2 is high fluor wax for cross country skiing, made for high dry conditions. Special Optiwax production process makes Glide Tape 2 extreme durable and hard.

Width 60mm, length 10 m  
Product No 20120081

Width 60 mm, length 40 m  
Product No 20120401

Width 60 mm, length 250 m  
Product No 20122501

### GLIDE TAPE UHF +1...-20°C

Black Optiwax Glide tape UHF is hardest and most durable glide tape. Ultra high Fluor concentration makes the working range of product extremely wide.

Width: 60mm, Length: 10m  
Product No: 20130101

Width: 60mm, Length: 40m  
Product No: 20130401

Width: 60mm, Length: 250m  
Product No: 20132501

## GLIDE TAPES FOR ALPINE SKIS

### GLIDE TAPE 1 WIDE +5...-10°C

Glide Tape 1 Wide is high fluor wax for alpine skiing, made for high humidity conditions. Wide function range and glide properties on wet and dirty snow makes Glide Tape 1 a great universal glide.

Width 120 mm, length 10 m  
Product No 20210081

Width 120 mm, length 25 m  
Product No 20210401

Width 120 mm, length 250 m  
Product No 20212501

### GLIDE TAPE 2 WIDE -5...-20°C

Glide Tape 2 Wide is high fluor wax for alpine skiing, made for high dry conditions. Special Optiwax production process makes Glide Tape 2 extreme durable and hard.

Width 120 mm, length 10 m  
Product No 20220081

Width 120 mm, length 10 m  
Product No 20220251

Width 120 mm, length 10 m  
Product No 20222501

### GLIDE TAPE UHF WIDE +1...-20°C

Black Optiwax Glide tape UHF is hardest and most durable glide tape. Ultra high Fluor concentration makes the working range of product extremely wide.

Width: 120mm, Length: 10m  
Product No 20230101

Width: 120mm, Length: 25m  
Product No 20230251

Width: 120mm, Length: 25m  
Product No 20232501

## GLIDE TAPES FOR SNOWBOARDS

### GLIDE TAPE 1 EXTRA WIDE +5...-10°C

Glide Tape 1 Extra Wide is high fluor wax for snowboards, made for high humidity conditions. Wide function range and glide properties on wet and dirty snow makes Glide Tape 1 a great universal glide.

Width 320mm, length 3,2m  
Product No 20310321

### GLIDE TAPE 2 EXTRA WIDE -5...-20°C

Glide Tape 2 Extra Wide is high fluor wax for snowboards, made for high dry conditions. Special Optiwax production process makes Glide Tape 2 extreme durable and hard.

Width 320mm, length 3,2m  
Product No 20320321

## GLIDE TAPE ECO PRODUCT LINE

Glide tape eco product line offers biodegradable eco-friendly products for xc-skiing, alpine and product for wide +120 mm skis. By choosing Glide tape eco users will get same extreme durability and user friendly application method than with other glide tapes. Wax itself is extreme wide working range universal wax, so it will be perfect choice for every condition. These glide tapes can be recycled with paper waste.

### GLIDE TAPE ECO UNIVERSAL +5...-20°C

Glide tape eco is non-Fluor eco-friendly product for xc-skiing. Product has extreme hard wax material which offers extreme durable and wide working range universal glide. This product can be used also over the skins, when it will improve its function by glide improvement, works against icing and prevent ski to became wet.

Width 60 mm, Length 10 m  
Product No 20140100

### GLIDE TAPE ECO WIDE UNIVERSAL +5...-20°C

Glide tape eco is non-Fluor eco-friendly product for Alpine skiing. Product has extreme hard wax material which offers extreme durable and wide working range universal glide. This product can be used also over the skins, when it will improve its function by glide improvement, works against icing and prevent ski to became wet.

Width 120 mm, Length 10 m  
Product no. 20240100

### GLIDE TAPE ECO FAT UNIVERSAL +5...-20°C

Glide tape eco is non-Fluor eco-friendly product for the wide +120 mm skis. Product has extreme hard wax material which offers extreme durable and wide working range universal glide. This product can be used also over the skins, when it will improve its function by glide improvement, works against icing and prevent ski to became wet.

Width 160 mm, Length 10 m  
Product No 20440100

Attach tip or tail of the ski to the glide tape package and pull out the glide tape over the glide area of ski (with the letters up). Heat the iron up to 150–160 °C. You do not need a special waxing iron. Glide the iron slowly on the glide tape so that the wax will warm and attach in the ski glide surface. After ironing pull the glide tape away and brush the ski. The ski is ready for a ride.

# CARE AND CLEANING PRODUCTS

The next generation of chemical nano coating treatments that we use embodies our goal to offer skis that work properly without any waxing, which means more time enjoying your journey on snow. This pioneer in waxless surfaces is being manufactured under the brand names Optigrip and Nanogrip. The secret of simultaneous glide and grip rests in the control of static and kinetic friction in different conditions. Grip and glide properties of the ski are based on the interaction of nano pores and the chemical construction of our coating material with snow. To ensure the best functionality of your skis, it is essential to use the correct care products for the surface in order to keep the surface pores open. Using Optiwax conditioners, you can be sure that the treatment is suitable for this unique surface and you will get the best out of your Etouch, Optigrip and Nanogrip skis.

## GRIPCARE®

Hydrocarbon free GripCare will increase function of Etouch, Optigrip and Nanogrip skis. It will increase glide and grip properties, it will ease initialization of new pair of skis and decrease freeze problems. Optiwax GripCare® fluid is easy to spread on the ski with sponge plug. Yoko recommends GripCare® service product for Optigrip skis.

Volume 60ml  
Product No. 60091001

## GRIPCARE® COLD

This product is to develop glide properties of Etouch, Optigrip and Nanogrip skis at cold conditions. It will ease initialization of new pair of skis and decrease freeze problems. Optiwax GripCare® Cold fluid is easy to spread on the ski with sponge plug. Yoko recommends GripCare® service product for Optigrip skis.

Volume 60ml  
Product No. 60091004

## GRIPCLEANER® ECO

Dirt effects Optigrip® -skis glide and grip properties. Optiwax GripCleaner® ECO will return those properties. It cleans the ski without damaging the surface. After GripCleaner® treatment use of GripCare® is recommended. GripCare eco is biodegradable and environmental friendly.

Volume 60ml  
Product No. 60090601

## SKINCLEANER

Optiwax Skincleaner is dirt repellent clean and care product for skin-skis. Skincleaner cleans effectively skis mohair hair from the dirt. The Fluor component prevent mohair to become dirty.

Volume: 170 ml  
Product No 60091003

## DIRT REMOVER

Dirt Remover is biodegradable cleaning agent, which removes dirt effectively from the glide zones. It is hydrocarbon solvent free product so it has minimal effect on the glide wax at ski. At dirty conditions ski can be cleaned with dirt remover and afterwards brush the base and continue with same waxing.

Volume: 170 ml  
Product No 60091701

## PRO TIP

Optiwax Skincleaner® and Glide Tape are perfect combo for skin-ski owner. Glide Tape waxing over the mohair offers perfect glide, prevent ski to become wet, works against dirt and skincleaner cleans the ski when its needed.

# LIQUID WAXES

Optiwax Fluor powder products are made especially for racing. These cutting edge waxes are a combination of award winning technology, knowledge, and experience. This combination has resulted in fast, durable, and versatile powder waxes for racers who only want the best.

## NF LIQUID WARM +5...-5°C

NF Liquid warm is non fluor liquid wax, for warm conditions. It's easy to apply to the ski base with sponge bottle. Spread wax to the ski base, wait 15-20 min, brush the ski and it's ready.

Volume: 60 ml  
Product No: 4322060

## NF LIQUID COLD -5...-20°C

NF Liquid warm is non Fluor liquid wax, for warm conditions. It's easy to apply to the ski base with sponge bottle. Spread wax to the ski base, wait 15-20 min, brush the ski and it's ready.

Volume: 60 ml  
Product No: 4342060

## EHF SPRAY NEW SNOW +5...-8°C

Optiwax EHF SPRAY new snow is special race wax for new snow conditions. Product have extreme high Fluor concentration and it has very hard wax materials, due of this it has very wide working range and extreme durability as a liquid wax. Wax is perfect choice for the new snow race waxing.

Volume: 150 ml  
Product No: 4043150

## EHF SPRAY OLD SNOW +0...-20°C

Optiwax EHF SPRAY old snow is special race wax for new snow conditions. Product have extreme high Fluor concentration and it has very hard wax materials, due of this it has very wide working range and extreme durability as a liquid wax. Wax is perfect choice for the old snow race waxing.

Volume: 150 ml  
Product No: 4044150

## LIQUID HF -20...+10°C

This quick liquid glide wax is suitable for all kind of snow types at wide temperature range, on its best when used on top of paraffin waxes. Great for skiers who want a well-performing quick glide. Shake, apply, let dry, polish and go skiing.

Volume: 60 ml  
Product No: 4500600

## FLUOR POWDER LIQUID +10...-5°C

Optiwax Fluor Powder liquid is race Fluor coating for the humid conditions. It is update version of liquid HF, which has been widely used at racing. Fluor Powder liquid has slightly improved glide properties at humid conditions compare to liquid HF. Also this products is on its best when used on top of paraffin waxes.

Volume: 60 ml  
Product No: 4500700

## FLUOR POWDERS

Optiwax Fluor powder products are made especially for racing. These cutting edge waxes are a combination of award winning technology, knowledge, and experience. This combination has resulted in fast, durable, and versatile powder waxes for racers who only want the best.

### FLUOR POWDER 0 WET, OLD SNOW +10...-8°C

The yellow Optiwax Fluor Powder 0 Wet is for old snow and wet conditions.

Net weight 25 g  
Product No. 50000252

### FLUOR POWDER 1 MID +2...-10°C

The red Optiwax Fluor Powder 1 is the choice for the new snow conditions.

Net weight 25 g  
Product No. 50010252

### FLUOR POWDER 2 COLD -8...-20°C

The white Optiwax Fluor Powder 2 is a special powder for extremely cold conditions.

Net weight 25 g  
Product No. 50020252

### HARD POWDER -10...-20°C

The Blue Optiwax Hard Powder is for cold and aggressive snow conditions.

Net weight 25 g  
Product No. 50050251

### GRIP POWDER

Optiwax Grip powder is developed for race skiers who want to improve glide properties of their gripwax.

Net weight 25 g  
Product No. 50090251

## FLUOR BLOCKS

Optiwax Fluor blocks can be used in multiple ways in race waxing. With simply three different blocks, you are able to create a world class glide for every condition. Together with a glide tape, Fluor blocks retain glide extremely long. That is why our Fluor blocks have been so popular among long distance racers. Optiwax Fluor blocks are a fast and easy way to create world cup level glide.

### FLUOR BLOCK 1 +4...-2°C

The Optiwax Fluor Block 1 is the best choice on new snow around zero degrees.

Net weight 15 g  
Product No. 40010151

Net weight: 5 g  
Product No. 40010051

### FLUOR BLOCK 2 -2...-8°C

The Optiwax Fluor Block 2 is a widerange block for old and artificial snow.

Net weight: 15 g  
Product No. 40020151

Net weight: 5 g  
Product No. 40020051

### FLUOR BLOCK 3 -8...-20°C

The Optiwax Fluor Block 3 is made for new fine structured snow in cold conditions.

Net weight: 15 g  
Product No. 40030151

Net weight: 5 g  
Product No. 40030051

# GLIDERS

We are inspired to offer well-tested and versatile products. We have strived to keep our product line as simple as possible in order to make choosing the right wax as easy as possible. These NF, LF, HF and EHF waxes are developed to cover all of your glide waxing needs.

## NON FLUOR GLIDERS

### NF 2 +2...-10°C

Made of high quality ingredients. This wax is the perfect choice for warm new snow conditions.

Net weight 60 g  
Product No. 33220601

### NF 3 -3...-20°C

NF3 wax has very wide working range and it's our most used NF wax. It is extremely durable and fast also in warmer conditions than stands on the label.

Net weight 60 g  
Product No. 33320604

Net weight 300 g  
Product No. 33323000

### NF 4 -10...-30 °C

For cold and aggressive snow. Extremely durable and fast on those conditions.

Net weight 60 g  
Product No. 33420601

Net weight: 300 g  
Product No. 33423000

## FLUOR GLIDERS

### LF 2 +2...-10°C

Made of high quality ingredients. This wax is the perfect choice as basic wax and it provides an excellent base layer for all kind of race waxes.

Net weight 60 g  
Product No. 30220601

Net weight 180 g  
Product No. 30223002

### LF 3 -3...-20°C

LF3 is low Fluor concentration wax with wide working range. It is extremely durable and fast also in warmer conditions than stands on the label.

Net weight 60 g Product  
No. 30320604

Net weight 180 g Product  
No. 30323002

### LF 4 -10...-30 °C

For cold and aggressive snow. Extremely durable and fast on those conditions and it offers excellent base for race waxing in the cold conditions.

Net weight 60 g  
Product No. 30420601

Net weight: 180 g  
Product No. 30423002

### BASE LF +10...-20 °C

Medium hard Universal low Fluor wax for base preparation and good choice for a universal glider

Net Weight 60g  
Product No. 30120601

Net weight: 300g  
Product No. 30223000

### HF 2 +2...-10 °C

Made with the same components as the LF2 wax but it has a far higher fluor concentration. For very humid conditions. Works perfectly as a base layer for Optiwax powders and blocks.

Net weight: 60 g  
Product No. 30320601

### HF 3 -3...-20 °C

High Fluor concentration wax with wide working range. It's extremely durable and fast also in warmer conditions. This wax is most used Optiwax High Fluor wax in race waxing.

Net weight: 60g  
Product No. 30330602

### HF 4 -10...-30 °C

Best choice for cold and dry conditions. It's optimized for cold and aggressive snow, wax can be used alone for racing in these conditions. Very durable in these harsh conditions.

Net weight: 60 g  
Product No. 30340601

### EHF NEW SNOW +5...-8°C

Optiwax EHF new snow is special race wax for new snow conditions. Product have extreme high Fluor concentration and it has very hard wax materials, due of this it has very wide working range and extreme durability as a liquid wax. Wax is perfect choice for the new snow race waxing.

Weight: 60 g  
Product No: 30430601

### EHF OLD SNOW +0...-20°C

Optiwax EHF old snow is special race wax for old snow conditions. Product have extreme high Fluor concentration and it has very hard wax materials, due of this it has very wide working range and extreme durability as a liquid wax. Wax is perfect choice for the old snow race waxing.

Weight: 60 g  
Product No: 30440601

## GRIPWAXES

Our Optiwax Gripwax line includes products that have optimized properties for different temperature ranges. The waxes for warmer weather include Fluor whereas the waxes for colder conditions don't. For this simple Grip wax line, we have chosen the best possible products for different temperature ranges.

### GRIP WAX 0 +2...-2°C

The Optiwax Gripwax 0 is a wax for conditions around zero. Good properties against icing.

Net weight 45g  
Product No. 90000201

### GRIP WAX 1 0...-3°C

The Optiwax Gripwax 1 is below zero wax with aggressive grip properties.

Net weight 45g  
Product No. 90001201

### GRIP WAX 2 -1...-6°C

The Optiwax Gripwax 2 Provides aggressive grip for cold conditions.

Net weight 45g  
Product No. 90002201

### GRIP WAX 3 -2...-10°C

Optiwax Gripwax 3 is universal grip wax for cold temperatures.

Net weight 45g  
Product No. 90003201

### BASE WAX

The Optiwax Base Wax offers very durable base for any gripwax.

Net weight 45g  
Product No. 90009201

## KLISTERS

The Optiwax klister line fulfills all the basic needs of klister waxing. From this simple line, it is easy to choose a correct klister for all conditions.

### KLISTER VIOLET KIKKAN +5...-10 °C

Klister for coarse and icy snow.

Net weight: 55 g  
Product No. 90003551

### KLISTER RED KIKKAN +10...0 °C

Special Klister for wet snow.

Net weight: 55 g  
Product No. 90001551

### KLISTER UNIVERSAL KIKKAN +5...-20 °C

Universal klister.

Net weight: 55 g  
Product No. 90002551
